# HRS
HOSPITALITY & RETAIL SYSTEMS

Centralize modifications and implementation to stores across your enterprise

A powerful configuration management tool, ORACLE Hospitality RES Enterprise Management (EM) enables corporate offices to control store-level information. This gives your chain's command center the ability to execute consistent pricing and respond quickly to changes in local restaurant-competition.

While individual restaurants enjoy the freedom to focus on operations and customer service, enterprise changes are centralized and implemented without difficulty. Increase menu offerings and promotions for the entire chain or target a single store. Accomplish tasks that took hours in just minutes!

View and compare stats across your enterprise. Create reports spanning across the enterprise to local stores. RES EM seamlessly integrates with mymicros.net for viewing of your reports on the Internet. Corporate can view status reports by store to evaluate individual profit centers. Integration to 3rd party reporting and accounting is also available via the corporate database.

Increase market share by controlling store-level information

RES Enterprise Management (EM) enables chain operations to manage and control store level databases for both POS and back office applications. It provides the ability for a chain's corporate office to enforce menu and pricing consistency as well as respond quickly and effectively to the needs of the local restaurant market.

Feature Management:

• Real-time POS menu updates while business is active
• Reduce the 'time to market' with new menu items and pricing updates
• Manage recipes across your enterprise
• Improve inventory control
• Centrally manage labor laws and minimum wage rates
• Forecast definitions for employee scheduling
• Global employee management
• One-touch new store creation

Centralized Management:

• Standardized definitions to maximize profitability
• Implement and manage different menus and pricing structures chain-wide
• Send changes to individual stores or groups of stores
• Allow local control of specific items by store managers
• Schedule item changes
• Built-in deployment mechanism

Reporting:

• Seamless integration to mymicros.net
• Corporate status report by store on changes
• Integration to 3rd-party reporting and accounting via corporate database
• Local store reporting

Ease the process of making changes to your business.

Create real-time POS menu updates while your business is active, without disruption. With RES EM you can reduce the "time to market" with new menu creation, items, and pricing updates. Manage recipes across your enterprise and improve inventory control. Better manage employees globally through centrally managing labor laws and minimum wage rates, and forecast definitions for employee scheduling. And best of all, create a new store with one touch!

Manage your business from one central location. With RES EM you can create standardized definitions to maximize profitability. Implement and manage different menus and pricing structures chain-wide to have cohesive offerings. Cater to local markets by sending changes to individual stores or groups of stores. You can give local control of specific items to store managers and implement item changes by effective dates. Benefit from a built-in deployment mechanism.
